

Route Image Saver - AWS S3 Setup Guide

Introduction

This guide will walk you through setting up a free Amazon Web Services (AWS) account and creating an S3 bucket. This bucket will securely store your permanent delivery photos. AWS provides 5 GB of free storage for the first 12 months, and is extremely inexpensive (~\$0.02 per GB) afterwards.

Step 1: Create an AWS Account and S3 Bucket

1. Go to aws.amazon.com and create a free account.
2. Log in, search for 'S3' in the top search bar, and click it.
3. Click the orange 'Create bucket' button.
4. Enter a Bucket Name (e.g., my-delivery-photos). Note: This must be globally unique!
5. Scroll down to 'Block Public Access settings for this bucket'.
 - UNCHECK the box that says 'Block all public access'.
 - Check the warning box below it to acknowledge. (This is required so your links work).
6. Scroll to the bottom and click 'Create bucket'.

Step 2: Make the photos viewable via links (Bucket Policy)

1. Click on the bucket you just created.
2. Click the 'Permissions' tab at the top.
3. Scroll down to 'Bucket policy' and click 'Edit'.
4. Paste the following code, but replace 'YOUR-BUCKET-NAME' with your actual bucket name:

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Sid": "PublicReadGetObject",
      "Effect": "Allow",
      "Principal": "*",
      "Action": "s3:GetObject",
      "Resource": "arn:aws:s3:::YOUR-BUCKET-NAME/*"
    }
  ]
}
```

Step 3: Get your Access Keys (IAM)

1. Search for 'IAM' in the top AWS search bar and click it.
2. On the left sidebar, click 'Users', then click the orange 'Create user' button.
3. Name the user (e.g., photo-uploader) and click Next.
4. Select 'Attach policies directly'.
5. Search for 'AmazonS3FullAccess', check the box next to it, and click Next, then Create user.
6. Click on the user you just created.
7. Click the 'Security credentials' tab.
8. Scroll down to 'Access keys' and click 'Create access key'.
9. Select 'Application running outside AWS' and click Next -> Create access key.

IMPORTANT: You will now see your Access Key ID and Secret Access Key. Keep this page open until you copy them, as AWS will only show the Secret Key once!

Step 4: Use the App

You now have the 3 pieces of information needed for the Route Image Saver app:

- AWS Access Key ID
- AWS Secret Access Key
- S3 Bucket Name

Open the Route Image Saver app, enter these into the sidebar, and upload your Excel file. Your keys will be saved securely in your browser for future use.
